.....

Dear readers,

The current stage in research and teaching is focused on the development of advanced intelligent methods and technologies in a wide range of simulation and control of technological processes in industry and service sectors.

Contributions in this issue therefore have a broad scope with the aim of illuminating some new perspectives on the effective use and implementation of advanced methods and algorithms in control and production.

We will thank you for contributions - we welcome your latest research results and technical solutions and we look forward to further collaboration.

Ing. Juraj Štefanovič, PhD.
ITA Executive editor
